

EE 102 Week 3, Lecture 2 (Fall 2026)

Date: September 16, 2026

Contents

1	Goals for today	3
2	Review: Signals and Systems	3
2.1	Example: A matrix as a system	3
2.2	Example: An amplifier as a system	4
2.3	Example: A differential equation as a system	4
2.4	Example: A frequency modulation system	4
3	Review: The three special signals	8
3.1	The unit step as a switch	8
3.2	Example: A square wave using steps	8
3.3	The unit impulse as a sampler	9
4	A candidate for “most” special in signal processing: Complex exponentials	10
4.1	Why complex numbers / complex signals?	10
4.2	Example 1: A sinusoidal signal using complex exponentials	10
4.3	Example 2: Real decaying exponential	11
4.4	Example 3: Exponentially damped sinusoid	11
4.5	A reminder about complex algebra	11
5	Properties of Systems	12

5.1	Example: LTI system response	13
5.2	Example: LTI system properties to compute system response	14
